INFECTED RICE

Mr. Craw reported that a quantity of rice brought by the Mongolia was infected with the grub of a dangerous moth. Most of the rice has been fumigated at the United States quarantine fumigating plant and the remainder of it is on the Pioneer and will be fumi-

Forester Hosmer reported that the following district forester and fire wardens had resigned: A. M. Nowell, Waialua, Oahu; Eric H. Edwards, South Kona, Hawaii; David Forbes, Hamakua, Hawaii; E. E. Conant, South Kohala, Hawaii. The following were appointed to fill the vacancies: District forester, Waialua, Oahu, W. W. Goodale: district fire warden, Waialua, Oahu, W. M. Templeton, manager of the Wahlawa Water Company at Wahiawa: district forester and district fire waruen, South Kona, Hawaii, R. von L. Domkowicz; district forester, South Kohala, Hawaii, A. W. Carter; district fire warden, South Kohala, Hawaii, Samuel M. Spencer; district forester and district fire warden for the western part of the District of Hamakua, August Ahrens.

The Committee on Forestry recommended the approval of a forest reserve on Maui, to be known as the Makawao Forest Reserve, adjoining the Koolau Forest Reserve. Forester mountains where the boundary cross-Hosmer's report on it, which was approved, was as follows:

I have the honor to submit a report with recommendations on a proposed future. extension of the Koolau (Maui) Forest Reserve, by the creation of a small additional reserve to be called the Ma-

kawao Forest Reserve. LOCATION.

The area in question is that portion sometimes called the Haleakala tract, in the district of Hamakuapoko, Is land of Maui, to the east of the Kahakapao gulch and between the falls of Pali o ka Moa and the hill known as Pun Kakae. The tract may be roughly described as lying on the northwestern slope of Mt. Haleakala, bounded on the north and east by the Koolau Forest Reserve, on the south by you are helping ever fifty deserving the land of Kalialinui and on the west girls and women who are employed in and northwest by the remainder of had more than once been unavoidably this Laundry to earn an honest living. the land of Makawao, and containing 1796 acres.

DESCRIPTION.

Makawao is a government land. In December, 1874, it was leased to the Board of Education for a nominal sum, and soon after subleased by that department at a fair rental for the remainder of the term. The lease, which was held of late years by the Haleakala Lace Curtains, Floor Cloths, Rugs, Ranch Company, expired on March 26 1904, since then the land has continued to be used by the ranch under a tenantcy at will. The land is therefore not now under lease.

The control of Makawae by the the most careful manner. Work for Board of Education explains the reason for the words "Board of Education" that appear across the land on the

> The question of the reservation of this part of Makawao has already received favorable consideration from the Board, in connection with a proposal made in November, 1904, by the Haleakala Ranch Company to exchange certain adjoining forest lands for the re-mainder of Makawao, whereby those lands and the portion of Makawao now under consideration were to be made a forest reserve. I submitted a re port at the time which is now on file in the office of the Board. The proposed exchange was not approved by the Governor. Consequently the matter was dropped. Later when the question of setting apart the forested portion of Makawao again came up it was decided to wait until an accurate description of the boundary could be had, Such a description is now in hand and forms a part of this report.

> The objects of the proposed Makawao Forest Reserve are to afford permanent protection to the forest cover on the water sheds of the streams rising within its limits and to extend to its natural western boundary the forest area in part protected by the existing Koolan Forest Reserve. The arguments made for the creation of the Koolau reserve are equally applicable; so far as its area goes, to the tract now proposed to be set apart. These have already been set forth at length in my report on the Koolau Reserve and need not be repeated here as that report, made under the date of July 28, 1905, was published in the Hawaiian Forester and Agriculturist for August,

1905, Vol. II, pp. 234-240.

precipitation gives place to the drier climate of the Kula district. The reason for this change of meteorological condition is due to topography. Makawao lies on the shoulder of the moun-

The open lands beyond are subject to different wind currents from those under forest to the eastward.

PRIVATE RESERVE.

For the past ten years the proposed ided, and by the ingenious use of the reserve has been treated as a private fact that insects usually seek the light, forest reserve by the Haleakala Ranch colonies of the parasite are collected in Company, which at its own expense glass tubes ready to be sent, anywhere, has built and maintained fences to keep without the necessity of handling them out the cattle. The guich itself is a barrier part of the way but at both serve fences are necessary. It may Jacob Kotinsky to go to the American be said in passing that within the last two years the Haleakala Ranch Com-Prof. Froggatt of Australia is going pany has also fenced in and now mainthere to examine into the matter of tains as a private forest reserve porsheep pests, and it was desired that tions of its fee simple land of Kalialinui. The official recognition of this the fact that he is so well acquainted private forest reserve will be considered with other forest questions on Mani in a future report.

Forester Hosmer reported that he expected to go to Maul shortly at the readvisability of a forest reserve near Kula; and also to look into a report made by Mr. Pogue that trees were dying in the Koolau Reserve from some kind of a fungus. At the same time he would take advantage of the opportunity to make a thorough inspection of the Nahiku rubber region. He reported on the work of his division since the

ast meeting of the board as follows: I have the honor to submit the following report covering the routine work of the Division of Forestry from

May 15, 1907, to date. During this period my own time has been taken up as follows: From May 14 to May 25 I was on Maui, making a trip around the west Maui mountain, in company with Mr. S. M. Kanakanui of the Survey office, establishing points on the boundary of the proposed reserve in that section. Mr. Kanakanui spent the greater part of June and part of July in locating and marking the points selected. As soon as the technical description is received from the surveyor a report on this project will be submitted to the Board. On May 28 and 29 in company with

Mr. H. M. von Holt and Mr. O. L. Sorenson of the Survey office, I visited the land of Honouliuli on this island to fix the points on the proposed forest reserve on the Waianae ed this land. Mr. Sorenson later located these points. The matter will be reported on to the Board in the near

During the first part of June I was in Honolulu engaging with various routine matters incident to the Na Pali-Kona (Kauai) and Koolau (Maui) forest reserves; to the completion of a list of foreign seed exchanges; to matof the government land of Makawao, blennial fiscal period and with other details connected with the regular work of the Division.

From July 18 to July 3 I was on the Island of Hawaii engaged: (1) in an inspection of the work of the Hawaiian Mahogany Lumber Company, undertaken at the request of the trustees of the Bishop Estate under the offer of assistance contained in circular No. 1 of this Division. This examination had been projected for some time and postponed. (2) In an examination of the land of Pilhonua, made at the request of the Commissioner of Public Lands.

Since my return to Honolulu I have been engaged in the preparation of reports on various forest reserves and other projects and with routine and other matters connected with the Di-

vision of Forestry. On May 27 a public hearing was held to consider the creation of the Na Pali-Kona forest reserve on Kauai and the setting apart of additional government lands on the forest reserves on Maui. On June 12 Acting Governor Atkinson signed proclamations carrying these projects into ef-

At the nursery considerable work has been done during the last two months toward bettering the condition of the grounds by curbing the walks and driveways and filling them with coral rock to conform to grade. When completed the grounds will be greatly improved. The larger part of the cost of these improvements is borne by the Department of Public Works from its appropriation for

The regular work of the nursery has gone on as usual; the most important features are the distribution of samples of Hawaiian grown seed to over one hundred foreign botanic gardens and similar institutions in different parts of the world; the local distribution of plants of the Central American rubber (Castilla lactiflua), better known under the old name of (Castilloa elastica); and several applications for planting plans for forest plantations.

A grass fire in Nuuanu valley on Sunday, June 30, was extinguished by the deputy fire warden for Nuuanu valley, Mr. G. H. Moore, before it did much damage. As a consequence of this fire an extension telephone bell has been put in at the nursery so that now some one of the employes of the Division can always be reached by telephone, day or night. The number ber is White 1991.

During June the various district foresters on the several islands were commissioned by the High Sheriff as special territorial police officers to enforce the new bird law (Act 104 of the Session Laws of 1907).

GLANDERS ON HAWAII.
